

Criteria for Reaching A Determination of Effect for both the Tendoy and White Pine Alternatives

<b>Criteria</b>	<b>Western (Boreal) Toad</b>	<b>Westslope Cutthroat Trout</b>
1. Does the activity likely involve the 'direct taking' of a sensitive species (including the capture, collection, harassment, or harm to individuals)?	Low Risk	No
2. Is the activity likely to involve the introduction of significant amounts of sediment (or other materials) into a perennial stream or intermittent stream channel immediately above a perennial stream?	No	No
3. Is the activity likely to significantly change the natural process of Large Woody Debris (LWD) recruitment into a perennial stream?	No	No
4. Is the activity likely to measurably increase water temperatures during critical low flow periods, or decrease winter water temperatures?	No	No
5. Is the activity likely to significantly disturb stream morphology within areas suitable for sensitive species?	No	No
6. Is the activity likely to significantly change riparian vegetation along a perennial stream or riparian area?	No	No
7. Is the activity likely to significantly change water quantity through diversion, withdrawal, or a change in water yield or groundwater?	No	No
8. Does the activity involve significant amounts of toxic or hazardous materials which could possibly be introduced into a stream course?	Low Risk	Low Risk
9. Does the activity involve activity on landtypes with the potential for mass movement and does the activity have the potential to change the natural rate and volume of mass movement?	No	No
10. Is there significant question or controversy regarding the potential effect of this activity on sensitive species, or their downstream habitat?	No	No
11. Would the decision document required to permit/allow this activity likely require an EIS?	No	No

All of the responses to the criteria #1 through #10 above are 'NO'. The determination of effects of this activity is either "NO IMPACT" or "NO EFFECT" or "BENEFICIAL IMPACT".	--	--
One or more of the responses to the above criteria (#1 through #10) are 'Yes'. The determination of effects of this activity is "MIIH" = MAY IMPACT INDIVIDUALS OR HABITAT, BUT WILL NOT LIKELY CONTRIBUTE TO A TRENDS TOWARDS FEDERAL LISTING OR, "WIFV" = WILL IMPACT INDIVIDUALS OR HABITAT WITH A CONSEQUENCE THAT THE ACTION MAY CONTRIBUTE TO A TREND TOWARDS FEDERAL LISTING	<b>MIIH</b>	<b>MIIH</b>
